Introducing Conner Strong & Buckelew's Automobile Accident Report Mobile Application

Beginning today, Conner Strong & Buckelew clients have access to a customized mobile application that automates and simplifies the process of filing an automobile accident report.

The moments following a car accident are often confusing. But how you respond in those moments can have a major bearing on how the situation is resolved. To make sure you are protected in this situation, this easy-to-use mobile app allows you to:

1. Read the Do's and Don'ts
2. Create a Report
3. Contact Conner Strong & Buckelew

The application is dual-purpose. It provides an at-a-glance reference guide for what employees should do following an accident. It also allows employees to file a report instantly by capturing all relevant data, including accident information, the other party's information, injuries, police investigation and witness information, an accident map and accident photos.

Once the employee has submitted the report, it will be automatically emailed to Conner Strong & Buckelew for processing – and saved within the application for future reference.

We encourage all clients with company vehicles or fleets to download this application. Not only will it help put your employees more at ease following an accident, it will help accelerate the claims process.

You can download the application by searching for "Conner Strong & Buckelew" in the iOS App Store or the Android Play Store.

For more information on our new mobile app, please contact your Conner Strong & Buckelew Claim Consultant.
