Premiums for Young Adults May Jump More Than 40% in 2014

The 3:1 maximum age-band ratio in the Affordable Care Act will hurt young Americans the most, in terms of higher premiums, according to a report published this month by the American Academy of Actuaries.

The analysis, conducted for the association by Oliver Wyman, projects that between 2013 and 2014, premiums for those aged 21 to 29 will rise by more than 40%. Those aged 30 to 39 are slightly better off, though 30-somethings can expect slightly more than a 30% premium increase over the same period. The oldest Americans who will get health coverage through the exchanges – those between 60 and 65 years old – will see the smallest premium increase, only about 2%.
